

Peer Feedback for Project Part 5

- ☒ ~~Make the nav home page clearer (as in make it more obvious it's a navigation menu)~~
- ☒ ~~Make navs consistent throughout~~
- ☒ ~~For the "all ducks" section, separate all ducks by their set/line and sort alphabetically~~
- ☐ Make a database for duck information, then create one page that updates dynamically based on the duck clicked
- ☒ ~~For ducks you don't have images for, use a "coming soon" image rather than a placeholder~~

Notes:

For #3, I did sort them alphabetically, but didn't separate them by set/line. I feel doing so would defeat the purpose of having the different "collections" and might be too much visual noise. The set/line the duck is part of is also indicated when you click on them for more information, so it could defeat the purpose of that as well.

For #4, it's something I'm considering, but not entirely sure about yet. It would make things less tedious, but I'm still on the fence about it for now.
